

Gabriel Cabral Melo

Full Stack Software Engineer | TypeScript • React • Node.js • NestJS | Cloud & DevOps (AWS/Oracle)

contatogabemelo@gmail.com | +55 (44) 99113-0870 | Maringá, PR, Brazil | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Full Stack Software Engineer with 3 years of experience developing modern and scalable applications using **Javascript** and **TypeScript** to build robust interfaces in **React** and efficient backend ecosystems in **Node.js**. Proven track record in cloud infrastructure optimization, resulting in a reduction of **81% in costs** on **AWS** and **50%** in system latency. Specialist in ensuring software quality through automated testing and accessibility (WCAG), with strong experience in **CI/CD and deployment** pipelines with automated deployment to cloud environments such as **Oracle Cloud**. Active user of AI-Assisted Development tools to accelerate deliveries under agile methodologies.

Experience

Principal Full Stack Software Engineer at C&S Softwares: 10/2025 – Present

Responsible for the full stack development of two main products: **Conecta Paraná (NestJS, Angular and Flutter)** and **Orçamento Fácil (Firebase and React)**, leading architectural decisions, cloud infrastructure and code governance.

- Led **Code Review** routines focused on performance and best practices, reducing by more than **60%** the incidence of bugs in production and ensuring the consistency of the codebase.
- Designed **API contracts** and implemented global interceptors on the frontend for error handling, reducing debugging time (*debugging*) in production and improving the user experience.
- Developed custom **Guards** and reusable **decorators** in **NestJS** for authentication and authorization, eliminating duplicated code and accelerating the creation of new secure routes.
- Structured the **Docker** environment and **CI/CD pipelines (GitHub Actions)** with **automated deployment** to Oracle Cloud, reducing the setup time for new developers from days to minutes.
- Raised the test coverage of the mobile app from **60% to 96%** using mutation testing (*Stryker Testing*), shielding critical business flows.
- Integrated **AI tools (Claude Code)** into the workflow, optimizing the delivery cycle of complex features from weeks to less than 2 days.

Tech Stack: TypeScript, JavaScript, Node.js, NestJS, React, Angular, Capacitor, Flutter/Dart, Docker, Oracle Cloud, GitHub Actions (CI/CD), PostgreSQL, Prisma ORM, Firebase, Stryker, Claude Code, Nginx.

Software Development Engineer in Test (SDET) / Software Engineer at Grupo UND: 02/2026 – 05/2026

Strategic role in quality assurance, performance auditing and automated test architecture for robust systems based on **Nuxt 4 (Vue.js)** and **Laravel 12**.

- Performed audits and implemented load testing using **K6** across the project ecosystems, identifying and fixing algorithmic complexity bottlenecks (*Big O*) and *memory leaks* under high concurrency.
- Structured and deployed the automated testing infrastructure using **Playwright (E2E)** and **Vitest (Unit)** with **TypeScript**, integrating mutation testing to ensure **effective coverage above 80%**.
- Developed and accelerated the team's automation *baseline* using **LLMs** and agentic programming for the design and autonomous execution of complex test scenarios.
- Conducted **Code Reviews** of critical features and validation of **API contracts**, combining AI-assisted testing to reduce delivery delays and mitigate bugs.

Tech Stack: TypeScript, K6, Playwright, Vitest, Vue.js (Nuxt 4), Laravel 12, Stryker, REST APIs, AI-Assisted Testing.

Backend Software Engineer at Good Software Dev: 12/2024 – 07/2025

Role focused on backend engineering, legacy system refactoring, infrastructure cost optimization and microservices architecture design for multiple clients.

- Reduced **AWS** infrastructure costs by **81% (US\$ 3.4k/month)** and **latency by 50%** through index optimization in **MongoDB** and automation of cleanup pipelines, enabling the *safe downgrade* from an M80 to an M40 instance.
- Recovered **US\$ 70k** in annual revenue by refactoring critical automations and **API** integrations in **Node.js (Axios/Express)**, eliminating communication failures and contractual errors in data processing.
- Designed and implemented the backend architecture for a real-time ticketing system based on **Webhooks and messaging**, reducing event processing latency by 35%.
- Reduced **MTTR by 50%** and ensured reliable deployments through container orchestration with **Docker** and **Kubernetes**, integrated into **CI/CD pipelines via GitHub Actions**.

Tech Stack: Node.js, Express, TypeScript, MongoDB, Redis, AWS, Docker, Kubernetes, GitHub Actions, Axios, OpenAPI/Swagger, Webhooks, Microservices.

Front End Development Instructor at Trybe: 01/2024 – 05/2024

Role in mentoring and professional acceleration of developers, focused on code quality, frontend architecture and job market preparation.

- Mentored more than 50 developers in the **React, TypeScript and JavaScript** ecosystem, accelerating the group's technical proficiency by more than 30% through targeted study plans.
- Conducted hands-on workshops and **Code Review** routines, raising the students' code quality standard in line with industry best practices.
- Structured technical scripts and documentation for mentoring sessions, standardizing support material and serving as a reference for the instructor team in conducting classes.
- Optimized the support and assistance flow via Slack, reducing the average resolution time for technical questions from 40 to 20 minutes.

Tech Stack: JavaScript, TypeScript, React, React Testing Library, Git, Slack, Technical Documentation.

Education

Systems Analysis and Development - UniCesumar (Brazil). Expected completion: Jul/2026.

Full-Stack Web Development Course - Trybe (Brazil). Dec/2024 (1 year).

GFT Start #7 - Java - Digital Innovation One. 2025.

Quality Assurance & Bug Management - Alura. 2024.

Languages - Portuguese (Native), English (Professional), Spanish (Conversational).

Technical Skills

Front End: React, TypeScript, JavaScript (ES6+), Angular, Vue, RxJS, Capacitor, Accessibility (WCAG), HTML5 / CSS3.

Back End & APIs: Node.js, NestJS, Express, TypeScript, REST APIs, Microservices, Webhooks, Redis, Axios, Swagger.

Databases & ORM: PostgreSQL, MySQL, MongoDB, Firebase, Prisma ORM, IndexedDB.

Cloud & DevOps: AWS, Oracle Cloud, Docker, Kubernetes, GitHub Actions (CI/CD), Nginx, Docker Compose, Linux, GHCR.

Testing & Quality: Playwright, Vitest, K6 (Load Testing), React Testing Library, Stryker, Infection, Pest PHP, API Testing.

AI-Assisted Development: Claude Code, Codex CLI, Agentic Programming, LLMs, Document Grounding.

Methodologies & Architecture: (DDD) Domain-Driven Design, Scrum, Jira, Kanban, Git, Network Security (Certbot, iptables).
